DreamPlay S

Streamer

DreamPlay S carries within it the Kalista DNA in its purest form — an obsession with detail, noble materials, and the conviction that silence between notes is as precious as the notes themselves. Hand-crafted entirely within the French manufacture Métronome Technologie, it is not merely a digital player but a dedicated sanctuary for music, where every technical choice exists solely to serve the streaming process at the highest possible level. Beyond this mastery lies the very soul of Kalista: an authentic, living sound that one only needs to hear to be definitively conquered.
